SOFTWARE REQUIREMENTS SPECIFICATION

Online Food Ordering System

Document ID	SRS-OFO-002	**Version**	1.0 – Practice Sample
Prepared for	TestGen AI PDF-ingestion and retrieval testing	**Date**	November 2026
Document status	Fictional learning sample; not production-approved	**Platform**	Web application

Purpose of this sample

This document describes a fictional online food ordering application. It is designed as a second test document for the TestGen AI project, so it contains numbered, testable requirements, validation rules, non-functional requirements and acceptance scenarios. Use it to check whether TestGen AI can process a different domain from the Skill Barter sample.

1. Introduction

The Online Food Ordering System allows customers to browse restaurants, view menus, add items to a cart, place orders, make payments and track order status. Restaurant staff can manage menu availability and update order progress. An administrator can manage users, restaurants and reported issues.

1.1 User roles

Customer: registers, signs in, browses restaurants, manages a cart, places orders, pays and tracks orders.
Restaurant Staff: manages menu availability and accepts or updates incoming orders.
Administrator: manages restaurant accounts, user reports and platform records.

1.2 Scope

The sample covers customer ordering, cart management, checkout, payment outcome handling, order tracking and basic restaurant-side order updates. Live GPS tracking, loyalty points, subscriptions and third-party delivery-partner integrations are outside this sample's scope.

2. Functional Requirements

ID	Feature	Requirement
FR-01	Customer registration	The system shall allow a new customer to create an account using a full name, valid email address, mobile number and password.
FR-02	Customer login	The system shall allow a registered customer to sign in using the registered email address and correct password.
FR-03	Invalid login	The system shall display an appropriate error message when the email address or password entered during login is incorrect.
FR-04	Browse restaurants	The system shall display active restaurants available for the customer's selected delivery location.
FR-05	Search restaurants	The system shall allow customers to search restaurants by restaurant name or cuisine type.

ID	Feature	Requirement
FR-06	View menu	The system shall display the selected restaurant's menu items with item name, description, price and availability status.
FR-07	Add item to cart	The system shall allow a customer to add an available menu item to the shopping cart and specify a quantity of at least one.
FR-08	Update cart quantity	The system shall allow a customer to increase or decrease an item's quantity and shall update the cart subtotal accordingly.
FR-09	Remove cart item	The system shall allow a customer to remove an item from the cart.
FR-10	Unavailable item validation	The system shall prevent customers from adding a menu item marked as unavailable to the cart.
FR-11	Delivery address	The system shall allow a customer to select a saved delivery address or add a new address before checkout.
FR-12	Place order	The system shall allow a customer to place an order when the cart contains at least one available item and a valid delivery address is selected.
FR-13	Order total	The system shall display the item subtotal, delivery fee, applicable taxes and final payable amount before the customer confirms the order.
FR-14	Online payment	The system shall allow a customer to attempt payment using an enabled online payment method.
FR-15	Payment failure	The system shall display a payment failure message and shall not mark the order as paid when the payment provider reports a failed transaction.
FR-16	Order confirmation	The system shall generate a unique order number and display an order confirmation after successful order placement and payment confirmation or an explicitly supported cash-on-delivery selection.
FR-17	Order status	The system shall display the latest order status to the customer: Placed, Accepted, Preparing, Ready for Pickup, Out for Delivery, Delivered or Cancelled.
FR-18	Restaurant order update	The system shall allow authorised restaurant staff to accept an incoming order and update its preparation status.
FR-19	Order cancellation	The system shall allow a customer to request cancellation while the order status is Placed or Accepted.
FR-20	Order history	The system shall display a signed-in customer's previous orders with order number, date, total amount and status.

3. Business Rules

Rule ID	Business rule
BR-01	A customer must be signed in before placing an order.
BR-02	A cart must contain at least one available item before checkout can proceed.
BR-03	An item quantity must be a whole number greater than or equal to one.
BR-04	The final payable amount must equal item subtotal plus delivery fee and applicable taxes, less any explicitly supported discount.
BR-05	An order must not be marked Paid unless the payment provider confirms successful payment.
BR-06	A unique order number must be assigned to each successfully placed order.
BR-07	A customer may request cancellation only while an order is in Placed or Accepted status.
BR-08	Only authorised restaurant staff may update restaurant order status.
BR-09	An unavailable menu item cannot be newly added to a cart.
BR-10	A customer may view only their own order history.

4. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Performance	The system should display restaurant search results within 3 seconds under normal operating conditions.
NFR-02	Availability	The system should target 99% monthly availability, excluding planned maintenance.
NFR-03	Security	The system shall restrict customer order history to the authenticated customer who owns the orders.
NFR-04	Data protection	The system shall not store raw payment card security codes.
NFR-05	Usability	The system should provide clear validation messages for missing or invalid checkout information.
NFR-06	Compatibility	The customer-facing web application should support current versions of major desktop and mobile browsers.
NFR-07	Reliability	The system shall avoid creating duplicate confirmed orders when a customer submits the same checkout request repeatedly due to a network retry.
NFR-08	Maintainability	The system should record application errors with a timestamp and a reference identifier for troubleshooting.

5. Acceptance Test Scenarios

ID	Scenario	Acceptance condition
AT-01	Successful customer registration	Given a visitor enters valid required details, when they submit registration, then the system creates the account and confirms success.
AT-02	Invalid login	Given a registered customer is on the login page, when they enter an incorrect password, then the system displays an appropriate error and does not sign them in.
AT-03	Add unavailable item	Given a menu item is marked unavailable, when a customer attempts to add it to the cart, then the system prevents the item from being added.

ID	Scenario	Acceptance condition
AT-04	Successful checkout	Given a signed-in customer has an available item in the cart and a valid delivery address, when payment succeeds and the order is confirmed, then the system displays a unique order number.
AT-05	Failed payment	Given a customer is checking out, when the payment provider reports a failed transaction, then the system displays a failure message and does not mark the order as paid.
AT-06	Cancel eligible order	Given an order is in Placed status, when the customer requests cancellation, then the system accepts the cancellation request and updates the order status to Cancelled.
AT-07	Prevent late cancellation	Given an order is in Preparing status, when the customer requests cancellation, then the system does not allow cancellation under the stated business rules.
AT-08	Protect order history	Given Customer A is signed in, when Customer A attempts to view Customer B's order history, then the system denies access.

6. Assumptions and Scope Notes

1. This is a fictional practice document and does not describe a real commercial product.
2. Payment processing is represented through an external payment provider; provider-specific API details are not defined.
3. Delivery fee and tax calculation rules are not assigned fixed numeric values in this sample.
4. The exact wording of error messages is not specified; test cases should verify that an appropriate message is shown rather than assume exact text.
5. Features not explicitly listed in this document, such as coupons, refunds, ratings and live GPS tracking, should not be treated as confirmed requirements.
