SOFTWARE REQUIREMENTS SPECIFICATION

Skill Barter – Skill Exchange Platform

Document ID	SRS-SB-001	**Version**	1.0 – Practice Sample
Prepared for	TestGen AI PDF-ingestion exercise	**Date**	November 2026
Document status	Sample requirements (not production-approved)	**Platform**	Web application

1. Introduction

Skill Barter is a web application that allows people to exchange knowledge and learn skills from one another without making monetary payments. A member can create a profile, list skills they can teach, request to learn another skill, arrange learning sessions, communicate with other members, and provide feedback after a session.

1.1 Purpose

This sample Software Requirements Specification (SRS) describes the expected behaviour of a small skill-exchange platform. It is intentionally written with numbered, testable requirements so that TestGen AI can retrieve them and generate test cases.

1.2 User roles

Member: registers, manages a profile, lists skills, sends or responds to requests, participates in sessions, chats, and submits ratings.
Administrator: reviews platform activity and manages reported or inappropriate content.

2. Functional Requirements

ID	Feature	Requirement
FR-01	Registration	The system shall allow a new member to create an account using a name, valid email address, and password.
FR-02	Login	The system shall allow a registered member to log in using the registered email address and correct password.
FR-03	Invalid login	The system shall display an appropriate error message when the email address or password is incorrect.
FR-04	Profile creation	The system shall allow a member to add and update profile details, including display name, biography, and learning interests.
FR-05	Profile validation	The system shall reject profile submissions when mandatory fields are missing or exceed the configured character limits.
FR-06	Offer a skill	The system shall allow a member to add a skill they are willing to teach, including a skill name and description.
FR-07	Browse skills	The system shall display available skills and allow members to search by skill name.
FR-08	Send a learning request	The system shall allow a member to send a request to learn a skill offered by another member.

ID	Feature	Requirement
FR-09	Request response	The system shall allow the skill owner to accept or reject a received learning request.
FR-10	Session scheduling	The system shall allow members to schedule an accepted skill exchange with a date and time.
FR-11	Session progress	The system shall display the progress status of a learning session, including not started, in progress, and completed.
FR-12	Session meeting link	The system shall allow members to access a meeting link associated with a scheduled online session.
FR-13	Member messaging	The system shall allow members involved in an accepted request to exchange text messages.
FR-14	Submit a rating	The system shall allow a member to submit a rating and written feedback after a session is marked completed.
FR-15	Rating restriction	The system shall prevent a member from submitting more than one rating for the same completed session.
FR-16	Administrator review	The system shall allow an administrator to review reported member content and take an appropriate moderation action.

3. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Usability	The application shall provide clear labels, validation messages, and navigation that can be understood by a first-time user.
NFR-02	Performance	For normal usage, the application should display a standard page within 3 seconds on a stable internet connection.
NFR-03	Security	Passwords shall not be stored as plain text. The system shall use secure password-hashing practices.
NFR-04	Authorization	A member shall not be able to access administrator-only functions.
NFR-05	Data validation	The application shall validate user input on the server before saving it.
NFR-06	Availability	The application should show a helpful message when a required service is temporarily unavailable.
NFR-07	Compatibility	The web application should support recent versions of commonly used desktop browsers.

4. Business Rules and Validation Examples

BR-01: A member must be logged in before sending a learning request.

BR-02: A learning request can be scheduled only after it has been accepted.

BR-03: A session can be marked completed only by an authorized participant or administrator.

BR-04: A rating can be submitted only for a completed session.

BR-05: An email address must use a valid email format and must not already belong to another account.

BR-06: A password must contain at least 8 characters. For this sample, require at least one letter and one number.

BR-07: A session date and time must be in the future when the session is first scheduled.

5. Basic Acceptance Scenarios

ID	Scenario	Acceptance condition
AT-01	Valid registration	Given a visitor enters all valid required details, when they submit registration, then the system creates the account and confirms success.
AT-02	Duplicate email	Given an email is already registered, when another visitor submits that email, then the system rejects the registration and explains the issue.
AT-03	Accepted request	Given a member receives a learning request, when they accept it, then the request status changes to Accepted.
AT-04	Rating before completion	Given a session is not completed, when a member attempts to rate it, then the system prevents the rating.
AT-05	Unauthorized admin access	Given a member account is logged in, when it requests an administrator-only page, then access is denied.

6. Assumptions and Scope Notes

This document is a fictionalized practice SRS created to test the TestGen AI PDF-reading and test-case-generation workflow. It is not a verified specification of any deployed Skill Barter application. Items such as password rules, performance targets, moderation, and authorization are sample requirements. Confirm actual product behaviour before using generated tests for real releases.
